

Visual Art (9)

Students demonstrate an understanding of how and why artists create. They develop skills in ceramics, printmaking, painting, 3D sculpture and use of mixed media. They record and analyze their research in workbooks and develop and create their own designs, using the elements and principles of art to discuss their work. Students ask each other for feedback and may use that to modify and refine their designs. Both the student's final artwork and the preparatory work are assessed. This includes the scope and quality of the research and its analysis, the development of the design and how it was influenced by research and peer comments, their workbook describing the process and an evaluation of the effectiveness of the final outcome.
